

ASSIGNMENT

For the post of Technical Head Institute Sports Council 2017-18

Create a small website on localhost. It should serve the following functionality:

BACKEND

You need to display a list of products/facilities (of any kind, that is your choice). You need to have a table containing these in your database.

The things you need to display about the product are:

1. Name
2. Description
3. Price

You can customise these fields, but a minimum of these 3 fields must be present.

Display some 5-10 entries.

FRONTEND

The design of the page is in your hands. It need not be overtly artsy, but it must be visually appealing. You can use templates. But make sure that your design works seamlessly on phone and tablets as well.

One of the tools you may use for this is the Yii(1.1) framework- which we use in the IITB Sports Website. Note that you must use an MVC framework to realise this goal.

HINT:

Create a table in the database for products. Create a model for this. Use a controller to derive and/or process data and a view to display data.

REFERENCE:

You may refer to the following:

1. If you haven't worked with MVC frameworks before, [here's](#) a tutorial.
2. If you're using Yii 1.1, [here](#) is a guide to get you going.

For further inquiries, feel free to [mail me](#). Or contact me at [9167851360](#).

Regards,

Jenil Shah,

Institute Sports Web Nominee '16- '17
